

REHABILITACIÓN DE CUBIERTAS EN EL ORATORIO DEL PARTAL Y CASA DE ASTASIO DE LA ALHAMBRA DE GRANADA

DESCRIPCIÓN DEL PROCESO DE MONTAJE DE ANDAMIOS

ALZADO SUR

Para el trabajo sobre la cubierta, se instalan escaleras de aluminio unidas y con tubos de aluminio transversales (protegidos con aislante que amortiguan la presión sobre las tejas) y que permiten desplazarse por la pendiente del tejado e incluso asegurarse a las mismas o a los tubos entre cerchas.

Estos dispositivos facilitan el trabajo de desplazamiento tanto del personal como de los materiales que se necesiten en el desarrollo de los trabajos y constituyen un elemento de seguridad fiable cuando se progresa sobre la cubierta ó el artesonado.

SUGERENCIA DE MEDIDAS DE SEGURIDAD COMPLEMENTARIA.
